STORIES INSIDE

Unite Us and Instacart Bridge Care Coordination and Grocery Benefits

Unite Us and Instacart are partnering to connect healthcare organizations' care coordination platforms directly with grocery benefits — making food-as-medicine programs easier to launch and operate at scale. A practical step toward addressing social determinants of health.

Stanford and OpenAI Build AI Watchdog for Cardiovascular Care

Stanford Medicine is receiving up to \$14.9M from ARPA-H to build STEWARD — a 3-stage supervisory system monitoring autonomous AI agents in cardiovascular care. Partnering with OpenAI, this initiative sets a new standard for AI governance in clinical settings. Safety, trust, and evaluation are finally getting the infrastructure they deserve.

FDA Clears First CGM-Driven Insulin Dose App for Type 2 Diabetes

The FDA has granted 510(k) clearance to MODI by DreaMed Diabetes — a prescription SaMD app that autonomously calculates and delivers insulin dose titration recommendations directly to Type 2 patients. This marks a new digital therapeutics category, bringing algorithmic dose optimization outside the hospital.

10 Health Systems Now Offer 24/7 AI-Powered Triage

UVA Health is the latest to join a growing cohort of health systems — including Cedars-Sinai and Atlantic Health — offering round-the-clock virtual primary care with AI triage that gathers patient information before connecting them to a clinician. The model is rapidly becoming a new standard for access.

Utah Approves First AI to Write New Prescriptions

Utah has approved a first-of-its-kind pilot allowing Nolla Health's AI to issue initial acne prescriptions without a physician visit. The program launches with physician oversight for the first 100 patients, gradually loosening to post-prescription review for up to 500 patients. This marks the first time in the U.S. that AI has been cleared to write new prescriptions — a potential inflection point for autonomous clinical AI.
