Europe Launches Sovereign AI Infrastructure for Clinical Deployments

The Danish Center for AI Innovation and Corti have launched Corti Models on the Gefion supercomputer — a governed, model-agnostic AI infrastructure layer giving European enterprises sovereign control over AI deployments, data security, and compliance. The platform offers an OpenAI-compatible API supporting sovereign cloud and on-premises environments. A significant step toward European clinical AI independence.

WellSky Deploys AI Summarization Across 120,000 Post-Acute Providers

WellSky has launched CareBrief, an AI-driven clinical summarization tool, and Patient Visibility Pro, a longitudinal post-discharge tracking capability, within its CarePort care transition suite. The tools target clinical data fragmentation and poor visibility after hospital discharge across a network of 120,000 providers. A meaningful push to close the post-acute care information gap with AI.
